

Football Match Manager - Technical Specification & Architecture Document

Table des Matières

1. Executive Summary & Architecture Overview

- 1.1 Executive Brief
- 1.2 Maturity Assessment
- 1.3 Technical Stack
- 1.4 Architectural Constraints
- 1.5 Critical Dependencies

2. Architecture Workflows & Visual Diagrams

- 2.1 Implementation Workflow Process
- 2.2 Project Documentation Topology

3. Detailed Technical Specifications & Business Rules

- 3.1 Requirements Traceability
- 3.2 Security Rules
- 3.3 Data Models

4. Project Governance & Structural Gaps

- 4.1 Structural Gaps
- 4.2 Remediation & Workflow

5. Technical & Domain Glossary (Terminology Reference)

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The Football Match Manager is currently in its initial conceptual phase, represented by a skeletal implementation plan template. The project aims to build a system for managing football matches, but it lacks a defined host platform, specific data patterns, and a concrete architectural identity. It serves as a structural blueprint awaiting technical specification.

1.2 Maturity Assessment

The project is in a nascent state, consisting only of a placeholder template. With a total absence of extracted nodes and edges for technical logic, and high-severity gaps in Data Models and API Contracts, the architecture is fundamentally undefined. Status: REFINEMENT.

1.3 Technical Stack

- **Languages/Frameworks**: Not yet specified (Template suggests Python 3.11)
- **Dependencies**: Not yet specified
- **Storage**: Not yet specified
- **Testing**: Not yet specified
- **Target Platform**: Not yet specified
- **Project Type**: Not yet specified

1.4 Architectural Constraints

- **Documentation Layout**: The project must strictly adhere to the prescribed documentation structure: ``plan.md``, ``research.md``, ``data-model.md``, ``quickstart.md``, ``contracts/``, and ``tasks.md``.

1.5 Critical Dependencies

- **Feature Specification**: A complete feature specification from ``/specs/[###-feature-name]/spec.md`` is required to populate the plan.
- **Constitution Check**: A mandatory constitution file check must be passed before initiating Phase 0 research.

2. Architecture Workflows & Visual Diagrams

2.1 Implementation Workflow Process

This flowchart models the execution workflow of the implementation plan from research to task generation.

2.2 Project Documentation Topology

Visual representation of the structured documentation layout defined in the `DOC-LAYOUT` element.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Requirement / Component	Description	Source Section
------------	-------------------------	-------------	----------------

DOC-LAYOUT	Documentati on Structure	Defined documentation structure including plan.md, research.md, data-model.md, quickstart.md, contracts/, and tasks.md	Documentation (this feature)
------------	-----------------------------	--	------------------------------

3.2 Security Rules

- *No security rules defined in the current source data.*

3.3 Data Models

- *No data models defined in the current source data.*

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Gap	Priority	Remediation Advice
Data Models & Schemas	HIGH	Define the core entities and database schema for football matches, players, and teams.
API Contracts & Flow	HIGH	Define the endpoints, request/response payloads, and the sequence of calls for match management.
Security & Identity	MEDIUM	Specify authentication and authorization requirements for the match manager.
Open Questions & Uncertainties	LOW	Identify technical risks or unknowns regarding the football domain logic.

4.2 Remediation & Workflow

The project must transition from the current "Template" state to a "Specified" state by populating the `research.md` and `data-model.md` files as outlined in the Implementation Workflow Process (Section 2.1).

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
Branch	TECHNICAL_STACK	Implementation Plan: Football Match Manager	The specific version control pointer designated for the development of this feature set.
Date	TECHNICAL_STACK	Implementation Plan: Football Match Manager	The chronological timestamp marking the creation or last update of the operational roadmap.
Spec	TECHNICAL_STACK	Implementation Plan: Football Match Manager	The markdown document containing the detailed functional and non-functional requirements.

Python 3.11	TECHNICAL_STACK	Technical Context	The designated runtime environment version for backend logic execution.
Primary Dependencies	TECHNICAL_STACK	Technical Context	The external software libraries and frameworks essential for system operation.
Storage	TECHNICAL_STACK	Technical Context	The persistence layer mechanism used for retaining state and entity data.
Testing	TECHNICAL_STACK	Technical Context	The framework and methodology used to verify the correctness of the implementation.
Target Platform	TECHNICAL_STACK	Technical Context	The intended operating system or hardware environment where the software will be deployed.
Project Type	TECHNICAL_STACK	Technical Context	The high-level architectural classification of the software artifact.
Performance Goals	TECHNICAL_STACK	Technical Context	The quantitative throughput and latency targets the system must satisfy.
Constraints	TECHNICAL_STACK	Technical Context	The hard technical limitations regarding memory, time, or environment connectivity.
GATE	TECHNICAL_STACK	Constitution Check	The mandatory validation checkpoint that must be cleared before progressing to the next development phase.
Structure Decision	TECHNICAL_STACK	[REMOVE IF UNUSED] Option 3: Mobile + API	The final selection of the directory layout from the provided architectural templates.
iOS	TECHNICAL_STACK	[REMOVE IF UNUSED] Option 3: Mobile + API	The specific mobile operating system targeted for the frontend implementation.
