Football Match Manager - Technical Specification & Architecture Document

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The 'Football Match Manager' project currently lacks a functional specification. The provided input is exclusively a quality audit checklist intended to validate a separate documentation file. Consequently, there is no defined host platform, data pattern, or core business logic available for architectural synthesis.

1.2 Maturity Assessment

The project is critically underdeveloped as the current source is a meta-document (checklist) rather than a technical specification. With high-severity gaps in Goals, Functional Requirements, Non-Functional Requirements, and Scope, and a total absence of relational edges in the graph, the project is BLOCKED. Execution cannot proceed until the actual spec.md is provided.

1.3 Technical Stack

- No languages, frameworks, or databases defined.

1.4 Architectural Constraints

- Specifications must exclude implementation details (languages, frameworks, APIs).
- Requirements must be testable and unambiguous.
- Success criteria must be measurable and technology-agnostic.
- Functional requirements must possess explicit acceptance criteria.

1.5 Critical Dependencies

- Availability of the referenced 'spec.md' source document.
- Definition of business objectives and core functional requirements.

2. Architecture Workflows

& Visual Diagrams

2.1 Specification Quality Validation Workflow

A workflow representing the validation process of the Football Match Manager specification based on the quality constraints.

2.2 Quality Constraint Traceability

Mapping of quality constraints to their respective validation sections.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Type	Description	Source Section
QUAL-01	Constraint	The specification must contain no implementation details (languages, frameworks, APIs).	Content Quality
QUAL-02	Constraint	Requirements must be testable and unambiguous.	Requirement Completeness

Identifier	Type	Description	Source Section
QUAL-03	Constraint	Success criteria must be measurable and technology-agnostic.	Requirement Completeness
QUAL-04	Constraint	All functional requirements must have clear acceptance criteria.	Feature Readiness

3.2 Security Rules

No security rules defined in the source documentation.

3.3 Data Models

No data models defined in the source documentation.

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Goals & Objectives	HIGH	The document is a checklist, not a spec. Provide the actual project goals and business objectives.
Functional Requirements	HIGH	Provide the detailed functional requirements for the Football Match Manager.
Non-Functional Requirements	HIGH	Define the performance, security, and availability requirements.
Scope & Out-of-Scope	HIGH	Clearly define what the feature will and will not do.
Open Questions & Uncertainties	MEDIUM	List any known unknowns or pending decisions.

4.2 Remediation & Workflow

The project is currently in a "Blocked" state. The primary remediation step is the provision of the spec.md file. Once the functional specification is available, it must be audited against the QUAL-01 through QUAL-04 constraints before technical architecture can be designed.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
Feature	BUSINESS_DOMAIN	QUAL-04	A distinct unit of system functionality that must satisfy specific measurable outcomes and possess validated acceptance criteria prior to technical planning.
