Football Match Manager - Technical Specification & Architecture Document

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The Football Match Manager is currently in a pre-architectural phase, represented by an implementation plan template. The project aims to establish a system for managing football matches, but it currently lacks a defined technical stack, data pattern, and host platform. It serves as a structural shell awaiting concrete technical specifications.

1.2 Maturity Assessment

The project is currently **BLOCKED**. The specifications consist entirely of placeholders and advisory templates with no concrete technical decisions made. Critical structural gaps include the total absence of data models, API contracts, and security identity definitions, rendering the current state unfit for execution.

1.3 Technical Stack

- **Languages & Frameworks:** NEEDS CLARIFICATION
- **Primary Dependencies:** NEEDS CLARIFICATION
- **Storage:** NEEDS CLARIFICATION
- **Testing:** NEEDS CLARIFICATION
- **Target Platform:** NEEDS CLARIFICATION
- **Project Type:** NEEDS CLARIFICATION

1.4 Architectural Constraints

- **Constitution Check Gate:** Mandatory validation required before Phase 0 research and after Phase 1 design.

1.5 Critical Dependencies

- Definition of target language and version.
- Selection of primary dependencies and storage mechanism.
- Determination of target platform and project type.
- Resolution of the project structure decision (Single project vs Web app vs Mobile+API).

2. Architecture Workflows

& Visual Diagrams

2.1 Implementation Workflow

This diagram models the execution workflow of the implementation plan, including the mandatory Constitution Check gate and the structural decision process.

2.2 Documentation Traceability

This diagram maps the relationship between the implementation plan and the required documentation artifacts.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Requirement / Choice	Source Section	Status
STRUC-DECISION	Selection of project structure (Single project, Web app, or Mobile+API)	[REMOVE IF UNUSED] Option 3: Mobile + API	Pending
GATE-CONST	Constitution Check Gate: Must pass before Phase 0 research	Constitution Check	High Criticality

3.2 Security Rules

- **Security & Identity:** NEEDS CLARIFICATION (Structural Gap).

3.3 Data Models

- **Data Models & Schemas:** NEEDS CLARIFICATION (Structural Gap).

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Data Models & Schemas	HIGH	Define the entities and database schema for the Football Match Manager.
API Contracts & Flow	HIGH	Define the endpoints and integration flows between components.
Security & Identity	MEDIUM	Specify authentication and authorization mechanisms.
Open Questions & Uncertainties	LOW	List technical unknowns to be resolved during research phase.

4.2 Remediation & Workflow

The project must transition from the current template state to a concrete specification by resolving the "Open Questions" (Language, Dependencies, Storage, Platform) and completing the Phase 0 (Research) and Phase 1 (Design) activities as defined in the Implementation Workflow.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
Branch	TECHNICAL_STACK	Implementation Plan: Football Match Manager	The specific version control pointer 001-football-match-manager used for this implementation cycle.
Date	TECHNICAL_STACK	Implementation Plan: Football Match Manager	The temporal marker 2026-07-30 designating the plan creation.
Spec	TECHNICAL_STACK	Implementation Plan: Football Match Manager	The external markdown file containing the detailed feature requirements.
Python 3.11	TECHNICAL_STACK	Technical Context	An example runtime environment listed as a potential candidate for the logic layer.
Primary Dependencies	TECHNICAL_STACK	Technical Context	The external libraries or frameworks required for system operation, currently awaiting final selection.
CoreData	TECHNICAL_STACK	Technical Context	An example local persistence framework listed for potential use.
Storage	TECHNICAL_STACK	Technical Context	The mechanism for data persistence, currently marked as needing clarification.
Testing	TECHNICAL_STACK	Technical Context	The verification suite and tools used to ensure code correctness.
Target Platform	TECHNICAL_STACK	Technical Context	The intended deployment environment, such as a mobile operating system or server.
Project Type	TECHNICAL_STACK	Technical Context	The architectural classification of the software, such as a web-service or mobile-app.
Performance Goals	TECHNICAL_STACK	Technical Context	The quantitative efficiency targets the system must achieve.
Constraints	TECHNICAL_STACK	Technical Context	The non-functional limitations and boundaries imposed on the implementation.

Term	Category	Context Anchor	Project Definition
GATE	TECHNICAL_STACK	GATE-CONST	A mandatory validation checkpoint that must be cleared before proceeding to the next phase.
Structure Decision	TECHNICAL_STACK	STRUC-DECISION	The final selection of the repository layout from the provided architectural options.
iOS	TECHNICAL_STACK	[REMOVE IF UNUSED] Option 3: Mobile + API	The mobile operating system target for the client-side implementation.
API	TECHNICAL_STACK	[REMOVE IF UNUSED] Option 2: Web application	The interface layer facilitating communication between the backend and external clients.
UI	TECHNICAL_STACK	[REMOVE IF UNUSED] Option 3: Mobile + API	The visual interaction layer for the end user.
WASM	TECHNICAL_STACK	Technical Context	An example binary instruction format for a stack-based virtual machine listed as a potential target.
LLVM	TECHNICAL_STACK	Technical Context	An example compiler infrastructure listed as a potential dependency.
LOC	TECHNICAL_STACK	Technical Context	The metric for measuring the volume of source code.
