Football Match Manager - Technical Specification & Architecture Document

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The project 'Football Match Manager' is currently represented only by a quality assurance checklist rather than a functional specification. No architectural patterns, host platforms, or data models have been defined, as the provided source is a validation document intended to audit the completeness of a missing 'spec.md' file.

1.2 Maturity Assessment

The project is currently BLOCKED. The analysis reveals a total absence of structural nodes and edges because the input is a meta-document (checklist) rather than a technical specification. High-severity gaps exist across all core domains, including Goals, Functional Requirements, and Scope, rendering the project unexecutable in its current state.

1.3 Technical Stack

- No technical stack defined in source data.

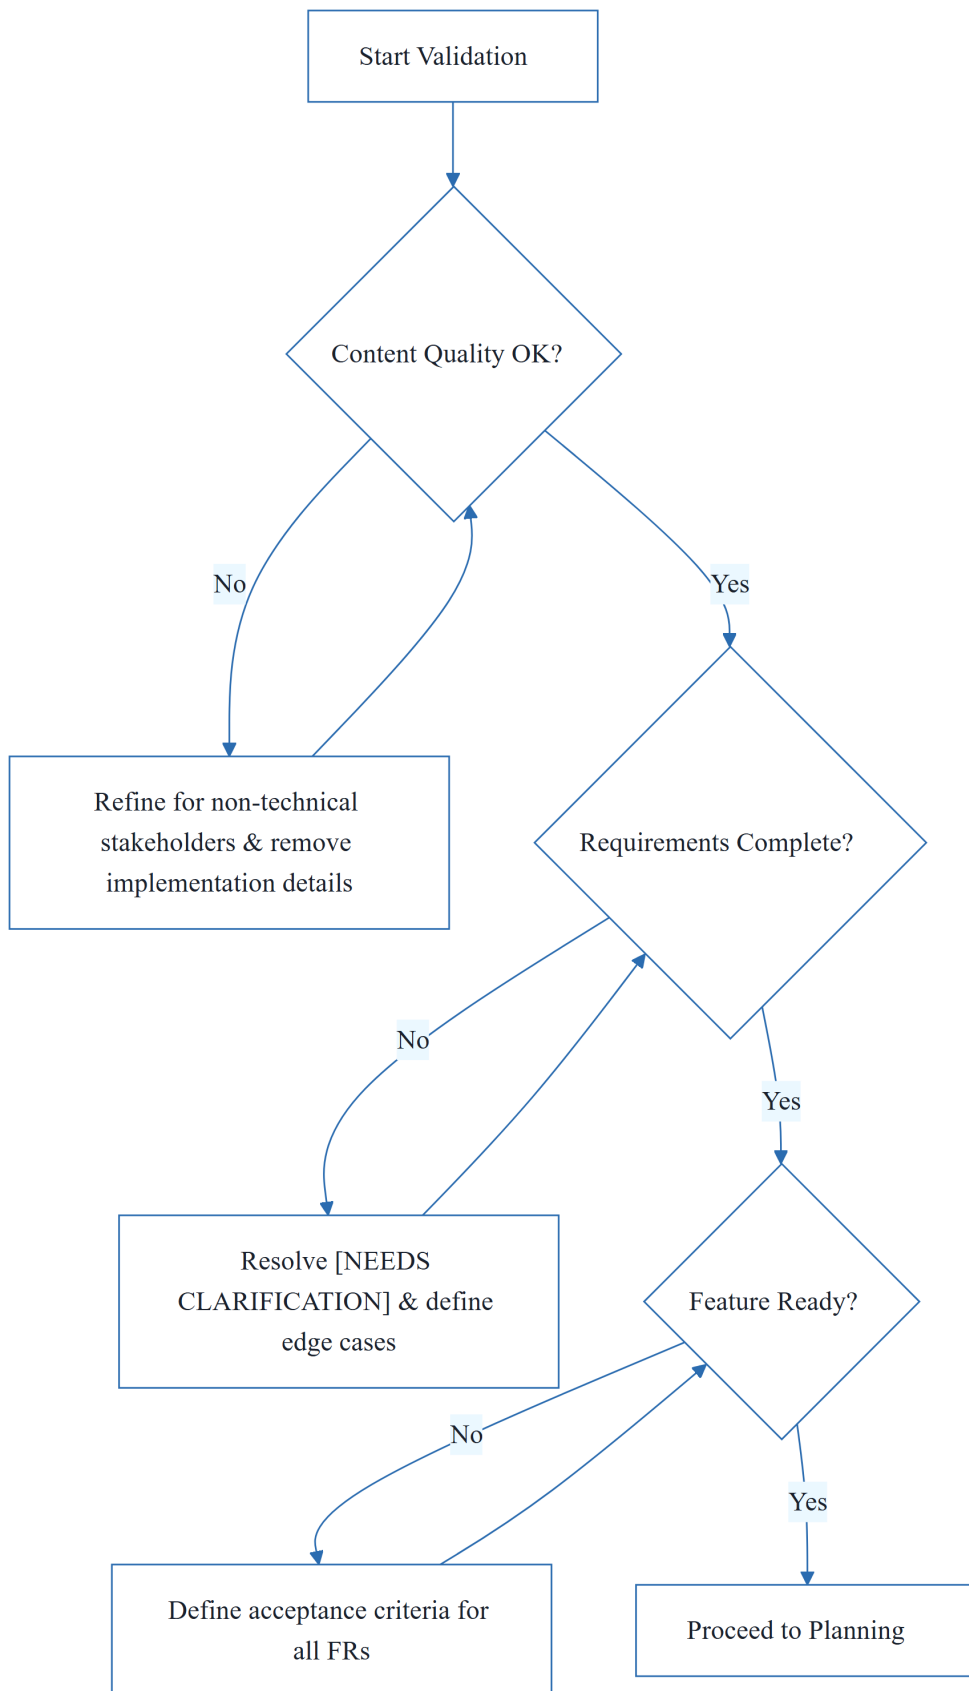

1.4 Architectural Constraints

- No architectural constraints defined in source data.

1.5 Critical Dependencies

- Provision of the actual 'spec.md' source file containing business logic and technical requirements.

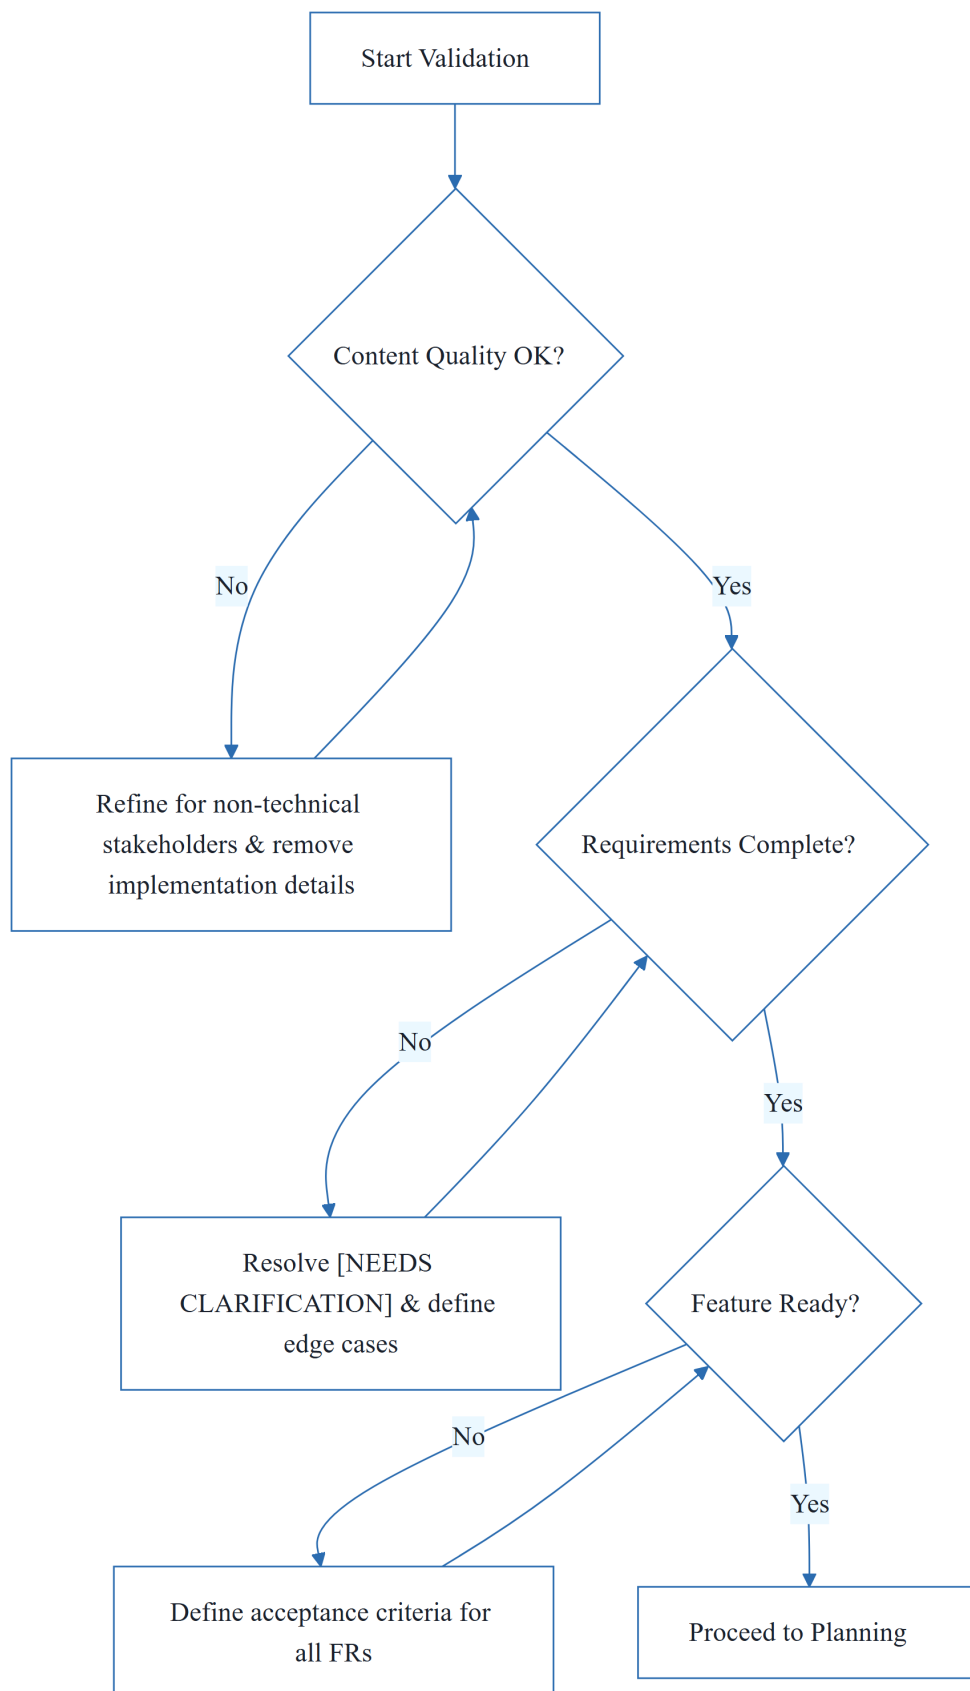

2. Architecture Workflows

& Visual Diagrams

2.1 Specification Validation Workflow

Models the quality assurance process described in the Specification Quality Checklist for the Football Match Manager project.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

No functional or technical requirements were found in the source document. The provided input is a quality checklist.

ID	Requirement Description	Source	Status
N/A	No requirements extracted from checklist	N/A	MISSING

3.2 Security Rules

No security rules defined in source data.

3.3 Data Models

No data models defined in source data.

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Goals & Objectives	HIGH	The document is a checklist. Please provide the actual 'spec.md' file containing the project goals.
Functional Requirements	HIGH	The document is a checklist. Please provide the actual 'spec.md' file containing the functional requirements.
Non-Functional Requirements	HIGH	The document is a checklist. Please provide the actual 'spec.md' file containing the non-functional requirements.
Scope & Out-of-Scope	HIGH	The document is a checklist. Please provide the actual 'spec.md' file containing the scope definition.
Open Questions & Uncertainties	MEDIUM	The document is a checklist. Please provide the actual 'spec.md' file containing the open questions.

4.2 Remediation & Workflow

The primary remediation action is the acquisition of the source `spec.md` file. The current document serves only as a validation gate. Until the actual specification is provided, the project cannot move

from the "Validation" phase to the "Planning" phase.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
Feature	BUSINESS_DOMAIN	Feature Readiness	A distinct unit of functionality that must satisfy measurable outcomes and associated acceptance criteria to be considered ready for planning.
