sales-item-management - Technical Specification & Architecture Document

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The sales-item-management project is currently in a pre-initialization state, represented by a structural implementation template. It aims to establish a feature-driven workflow for item management, but lacks a defined host platform, data pattern, or concrete technical identity. The current scope is limited to the definition of the execution pipeline and project structure options.

1.2 Maturity Assessment

The project is currently **BLOCKED**. While the structural template is complete, it contains zero actual technical specifications. The presence of high-severity structural gaps regarding Data Models and API Contracts, combined with the absence of a selected project structure, indicates that the project has not yet transitioned from a template to a functional specification.

1.3 Technical Stack

- **Languages/Frameworks:** NEEDS CLARIFICATION
- **Primary Dependencies:** NEEDS CLARIFICATION
- **Storage:** NEEDS CLARIFICATION
- **Testing:** NEEDS CLARIFICATION
- **Target Platform:** NEEDS CLARIFICATION
- **Project Type:** NEEDS CLARIFICATION

1.4 Architectural Constraints

- **Governance Gate:** Mandatory Constitution Check gate must be passed before Phase 0 research.
- **Documentation Pipeline:** Strict sequential dependency: `research.md` $\rightarrow$ `data-model.md/quickstart.md/contracts/` $\rightarrow$ `tasks.md`.

1.5 Critical Dependencies

- **Constitution File:** Required for security and identity gate validation.
- **Structure Selection:** Selection of project structure (Single project, Web app, or Mobile+API) is a prerequisite for Phase 1 documentation.
- **Linear Workflow:** Strict linear dependency between Phase 0, Phase 1, and Phase 2 documentation deliverables.

2. Architecture Workflows

& Visual Diagrams

2.1 Implementation Workflow & Documentation Pipeline

Models the sequential generation of project documentation and the critical constitution gate, including the structural decision point.

2.2 Requirements Traceability Map

Maps the relationship between the architectural decision and the documentation phases to ensure traceability.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Requirement / Element	Source Section	Status
STRUC-DECISION	Selection of project structure (Single project, Web app, or Mobile+API)	[REMOVE IF UNUSED] Option 3: Mobile + API	Pending
GATE-CONSTITUTION	Constitution Check: Must pass before Phase 0 research	Constitution Check	High Criticality
DOC-GEN-PHASE0	Generate research.md	Documentation (this feature)	Phase 0
DOC-GEN-PHASE1	Generate data-model.md, quickstart.md, and contracts/	Documentation (this feature)	Phase 1
DOC-GEN-PHASE2	Generate tasks.md	Documentation (this feature)	Phase 2

3.2 Security Rules

- **Identity Gate:** No research or design phase may commence without a successful GATE-CONSTITUTION validation.

3.3 Data Models

- **Current State:** No data models defined. Data model generation is deferred to DOC-GEN-PHASE1.

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Data Models & Schemas	HIGH	The template mentions data-model.md as a Phase 1 output, but no actual schema is defined in this document.
API Contracts & Flow	HIGH	The template mentions a contracts/ folder as a Phase 1 output, but no endpoints or flows are defined.

4.2 Remediation & Workflow

The project must follow the linear documentation pipeline defined in Section 2.1. The immediate next step is the resolution of the GATE-CONSTITUTION and the selection of the STRUC-DECISION to unlock the generation of technical deliverables.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
Branch	TECHNICAL_STACK	Implementation Plan: [FEATURE]	The specific version control pointer associated with the feature implementation.
CoreData	TECHNICAL_STACK	Technical Context	The object-graph management framework used for local persistence.
DATE	TECHNICAL_STACK	Implementation Plan: [FEATURE]	The temporal marker indicating when the plan was established.
DB	TECHNICAL_STACK	Complexity Tracking	The persistent relational or non-relational data store.
GATE	BUSINESS_DOMAIN	Constitution Check	A mandatory validation milestone that must be cleared before proceeding to subsequent phases.
LLVM	TECHNICAL_STACK	Technical Context	The compiler infrastructure used for low-level code optimization and generation.
LOC	TECHNICAL_STACK	Technical Context	The quantitative measure of source code volume.
Performance Goals	BUSINESS_DOMAIN	Technical Context	The target quantitative metrics for system efficiency and responsiveness.

Term	Category	Context Anchor	Project Definition
Primary Dependencies	TECHNICAL_STACK	Technical Context	The essential external libraries or frameworks required for the system to function.
Project Type	TECHNICAL_STACK	Technical Context	The architectural classification of the software, such as a web-service or mobile-app.
Python 3.11	TECHNICAL_STACK	Technical Context	The specific version of the high-level interpreted language used for implementation.
Spec	BUSINESS_DOMAIN	Implementation Plan: [FEATURE]	The formal documentation defining the requirements and expected behavior of a feature.
Storage	TECHNICAL_STACK	Technical Context	The mechanism and technology used for long-term data retention.
Structure Decision	TECHNICAL_STACK	STRUC-DECISION	The final selection of the directory layout and modular organization.
Target Platform	TECHNICAL_STACK	Technical Context	The intended operating environment where the software will be deployed.
Testing	TECHNICAL_STACK	Technical Context	The framework and methodology used to verify the correctness of the implementation.
UI	TECHNICAL_STACK	[REMOVE IF UNUSED] Option 3: Mobile + API	The visual layer and interaction components presented to the end user.
WASM	TECHNICAL_STACK	Technical Context	The binary instruction format for a stack-based virtual machine.
iOS	TECHNICAL_STACK	Technical Context	The mobile operating system provided by Apple.
