Sales Item Management System - Technical Specification & Architecture Document

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The project is currently in a pre-planning validation phase for a Sales Item Management System. The provided documentation is a quality assurance checklist designed to audit the completeness of a separate functional specification (spec.md). It establishes a governance framework to ensure business requirements are technology-agnostic, testable, and focused on user value before technical execution begins.

1.2 Maturity Assessment

The project is currently in a state of REFINEMENT. While the quality checklist itself is comprehensive, the actual business logic and functional specifications for the Sales Item Management system are entirely absent from the current graph. The presence of high-severity structural gaps regarding scope and unresolved uncertainties indicates that the project cannot proceed to the planning phase until the referenced spec.md is integrated.

1.3 Technical Stack

- No technical stack defined (Project is currently technology-agnostic).

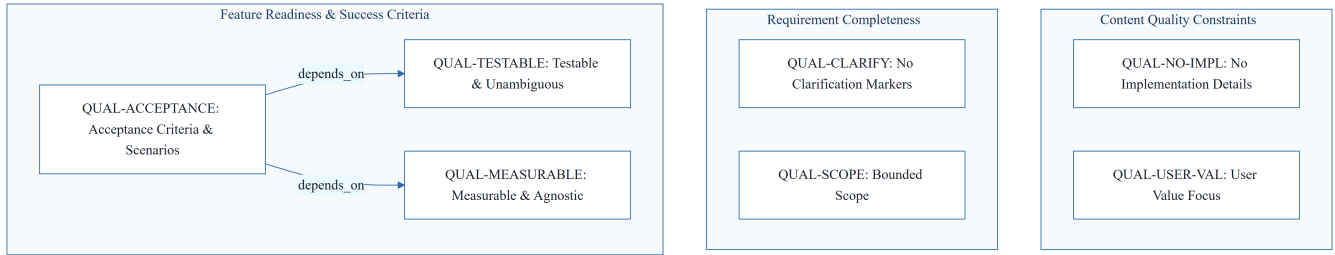

1.4 Architectural Constraints

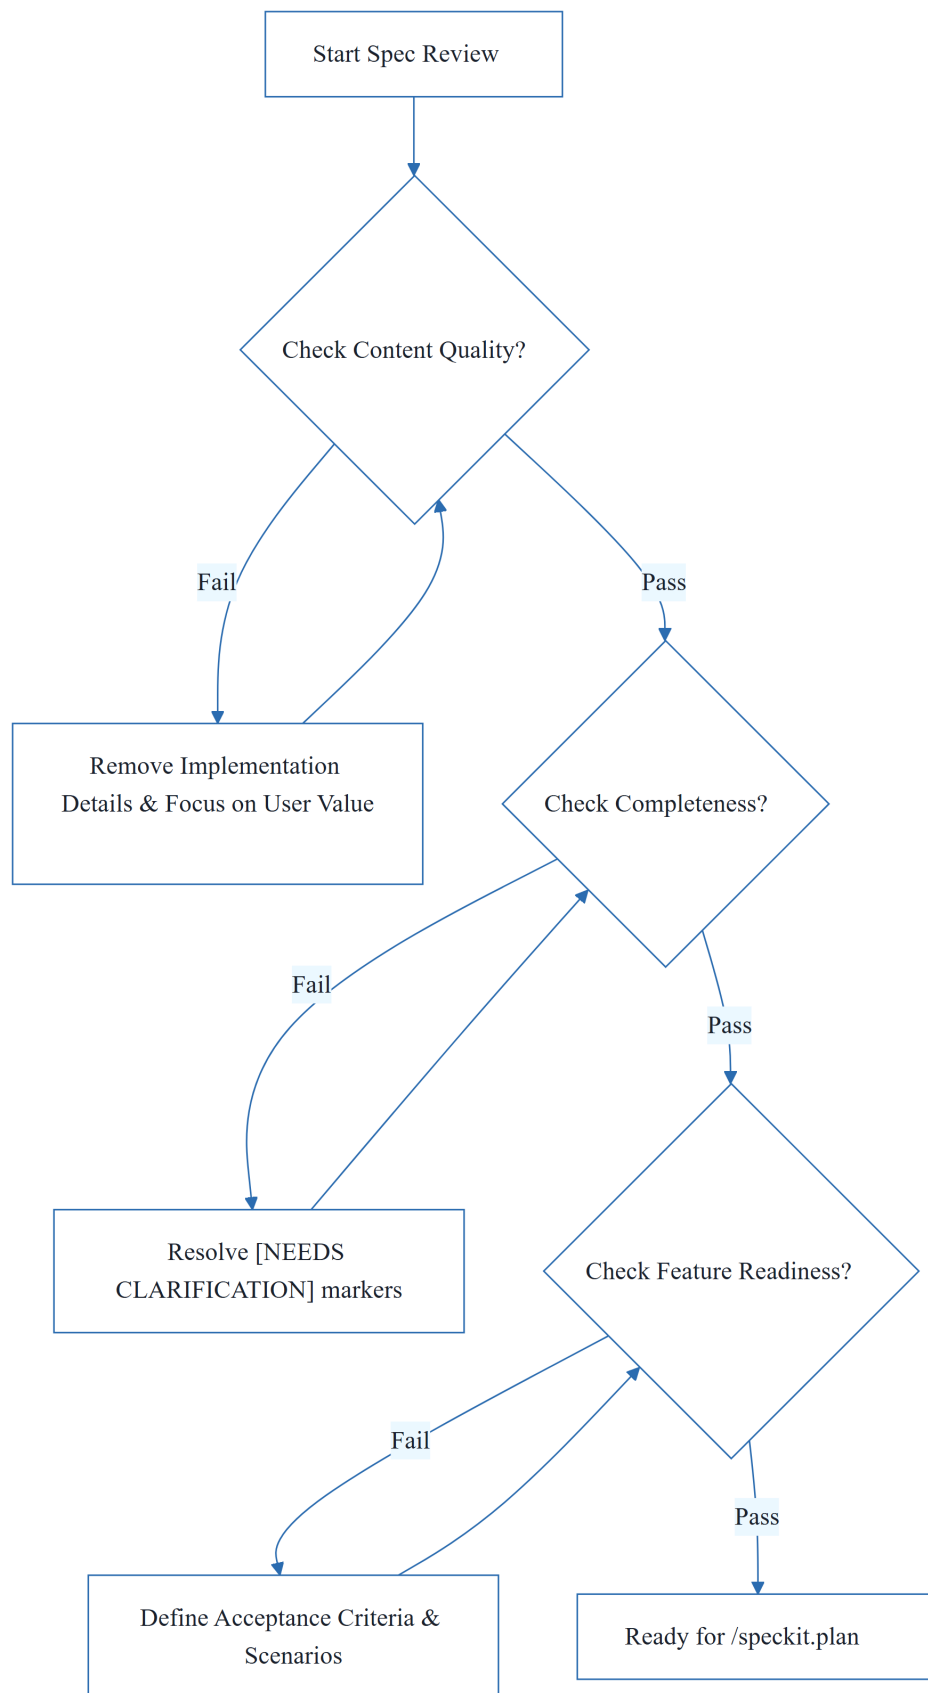

- Strict prohibition of implementation details (languages, frameworks, APIs) within the specification.
- Mandatory removal of all [NEEDS CLARIFICATION] markers prior to planning.
- Requirement for technology-agnostic success criteria.
- Mandatory alignment of functional requirements with measurable acceptance criteria.

1.5 Critical Dependencies

- Availability of the external spec.md functional specification.
- Resolution of all [NEEDS CLARIFICATION] markers as a workflow gate for /speckit.plan.
- Logical dependency between acceptance criteria (QUAL-ACCEPTANCE) and testability/measurability (QUAL-TESTABLE, QUAL-MEASURABLE).

2. Architecture Workflows

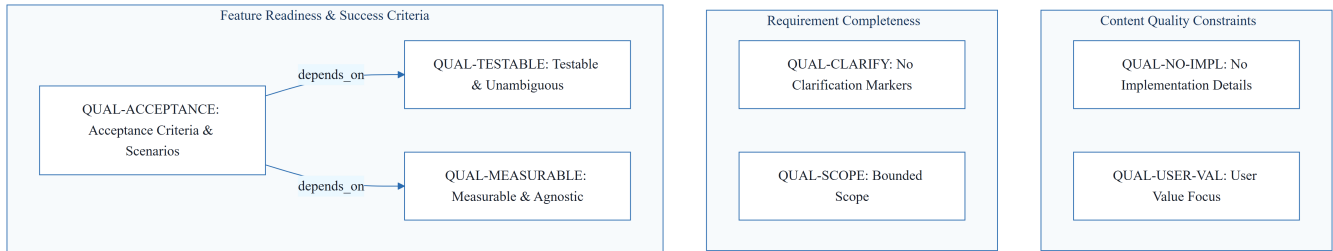

& Visual Diagrams

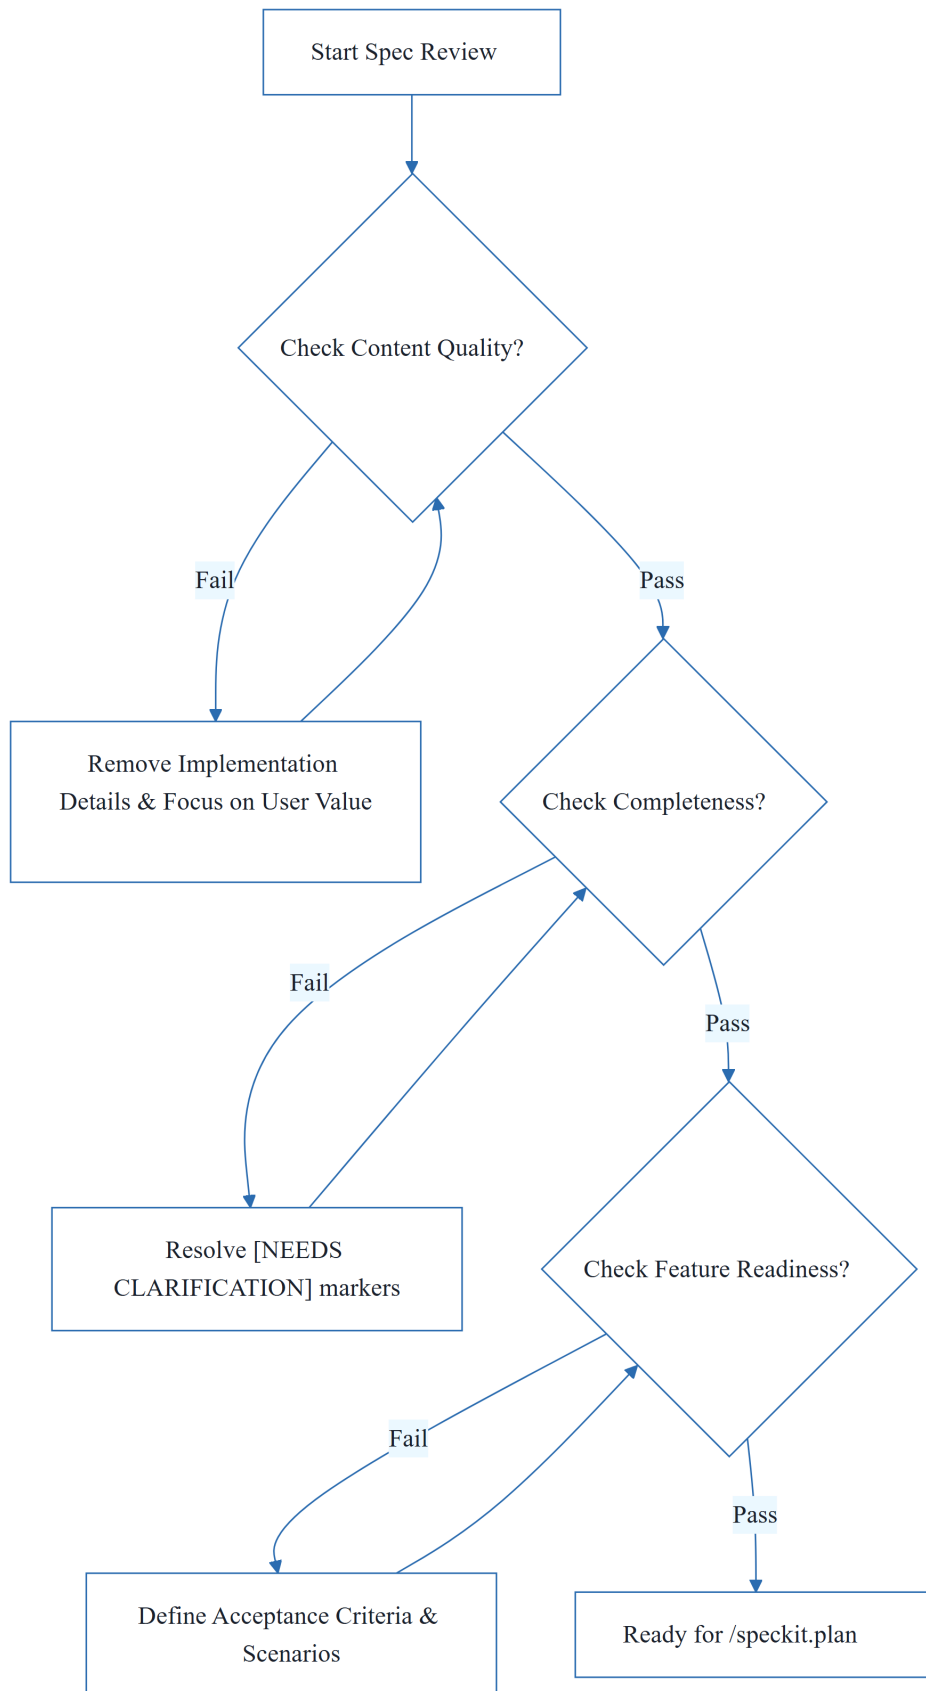

2.1 Specification Quality Traceability Map

Models the traceability and dependencies between specification quality requirements and success criteria.

2.2 Specification Validation Workflow

The business process for validating a specification based on the quality checklist items.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Type	Description	Source Section	Status
QUAL-NO-IMPL	Constraint	Specification must contain no implementation details (languages, frameworks, APIs).	Content Quality	validated
QUAL-USER-VAL	Constraint	Specification must be focused on user value and business needs.	Content Quality	validated
QUAL-CLARIFY	Requirement	No [NEEDS CLARIFICATION] markers must remain in the document.	Requirement Completeness	pending
QUAL-TESTABLE	Success Criterion	Requirements must be testable and unambiguous.	Requirement Completeness	validated
QUAL-MEASURABLE	Success Criterion	Success criteria must be measurable and technology-agnostic.	Requirement Completeness	validated
QUAL-SCOPE	Requirement	Scope must be clearly bounded.	Requirement Completeness	validated
QUAL-ACCEPTANCE	Requirement	All functional requirements must have clear acceptance criteria and user scenarios covering primary flows.	Feature Readiness	validated

3.2 Security Rules

- No security rules defined in the current source data.

3.3 Data Models

- No data models defined in the current source data.

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Scope & Out-of-Scope	HIGH	The document is a checklist; the actual scope of the Sales Item Management system is missing. Please provide the spec.md file.
Open Questions & Uncertainties	MEDIUM	While the checklist mentions clarification markers, the actual open questions of the project are not listed.

4.2 Remediation & Workflow

The project must integrate the `spec.md` functional specification to resolve the high-priority structural gaps. The workflow gate for proceeding to `/speckit.plan` is the total resolution of all [NEEDS CLARIFICATION] markers (QUAL-CLARIFY).

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
Feature	BUSINESS_DOMAIN	Feature Readiness	A functional unit that must satisfy measurable outcomes and possess verified acceptance criteria and primary user flows.
