

# 1. CLI To-Do Manager Technical Traceability

Maps the core CLI task to its technical constraints, dependencies, and performance requirements using exact identifiers.

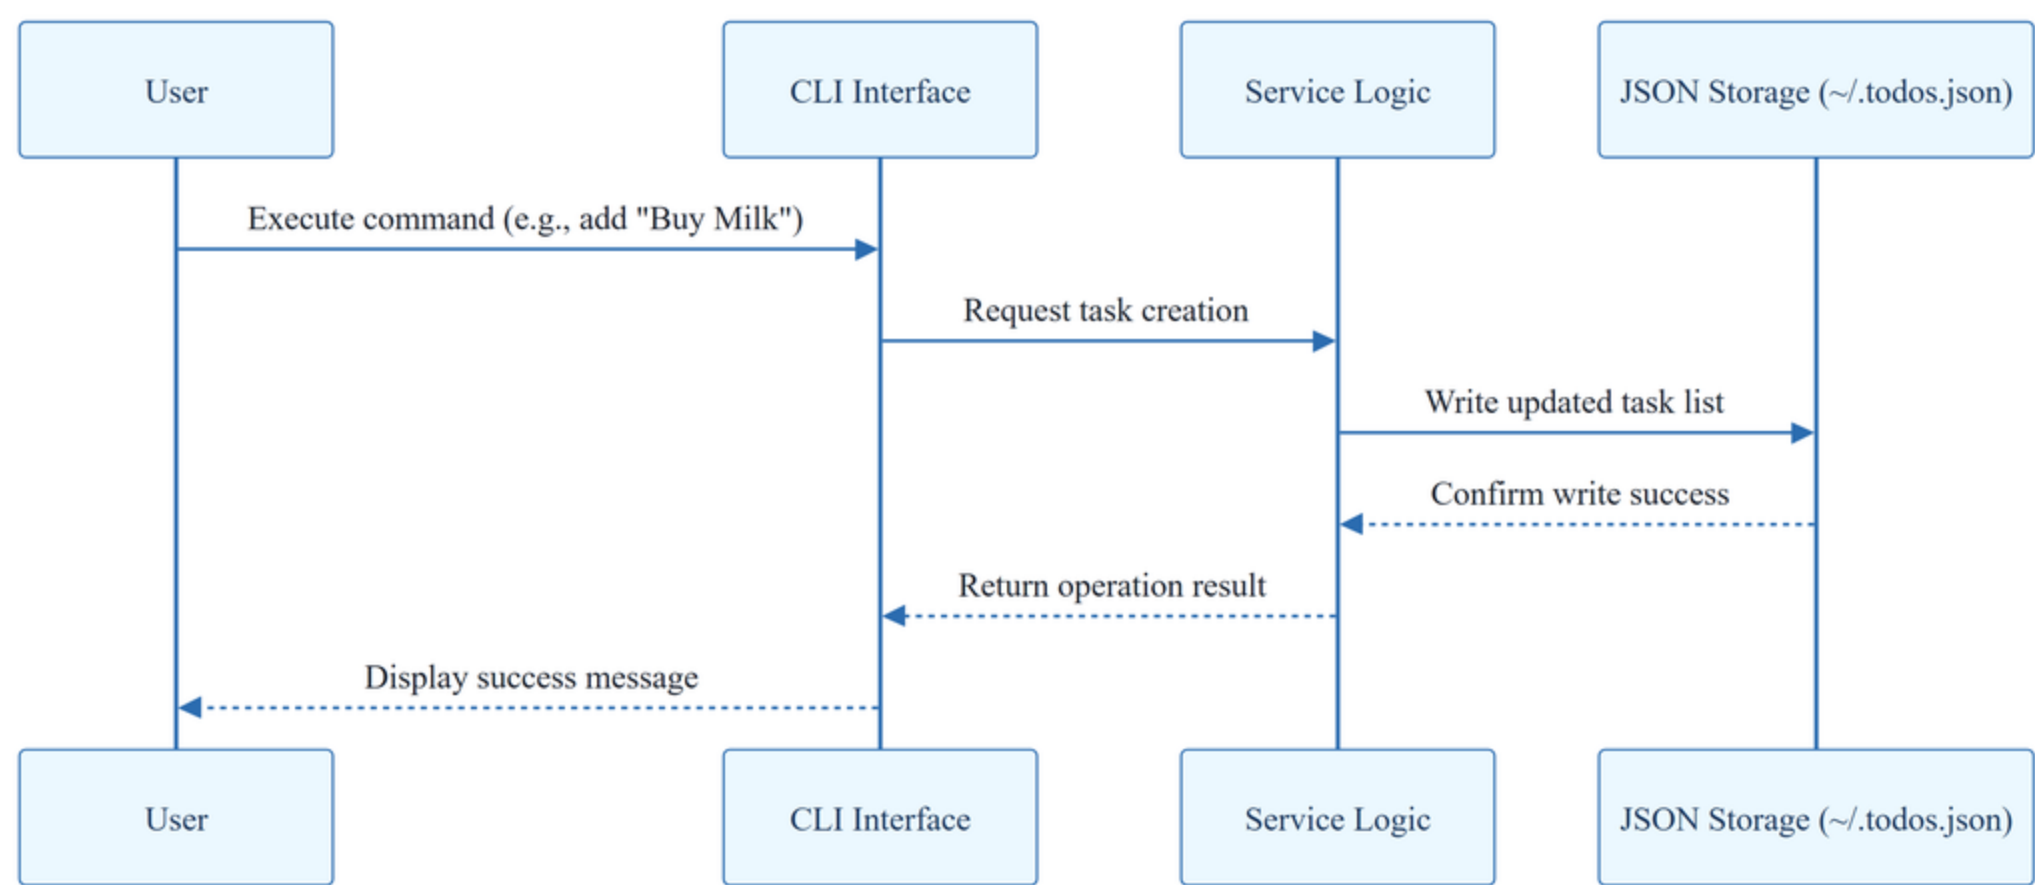

## 2. CLI Command Execution Workflow

Models the business logic for processing a CLI command, including validation and output format branching.

### 3. CLI Interaction Sequence

Sequence of interactions between the User, the CLI Interface, the Service layer, and the JSON Storage.

# 4. Task Data Model

Conceptual data model for the JSON persistence layer based on the project requirements.
