

CourseHub API - Technical Specification & Architecture Document

Table des Matières

1. Executive Summary & Architecture Overview

- 1.1 Executive Brief
- 1.2 Maturity Assessment
- 1.3 Technical Stack
- 1.4 Architectural Constraints
- 1.5 Critical Dependencies

2. Architecture Workflows & Visual Diagrams

3. Detailed Technical Specifications & Business Rules

- 3.1 Requirements Traceability
- 3.2 Security Rules
- 3.3 Data Models

4. Project Governance & Structural Gaps

- 4.1 Structural Gaps
- 4.2 Remediation & Workflow

5. Technical & Domain Glossary (Terminology Reference)

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The project targets the CourseHub API, though the current input is limited to a quality validation checklist rather than a functional specification. The system's core identity is an API-driven platform for course management, currently undergoing a final quality control gate to ensure requirements are testable, unambiguous, and technically agnostic before the planning phase.

1.2 Maturity Assessment

The project is currently BLOCKED from an execution standpoint. While the document is a 100% complete checklist, it contains zero architectural substance, mapping to a health index of 35.0. There is a total absence of goals, functional requirements, non-functional requirements, and scope definitions, as the source provided is a meta-document for validation rather than the actual technical specification.

1.3 Technical Stack

- No specific languages, frameworks, or databases identified in the provided quality checklist.

1.4 Architectural Constraints

- Strict separation between functional definitions and implementation details (no languages/frameworks in feature specs).
- Requirements must be strictly testable and non-ambiguous.
- Success criteria must be measurable and technology-agnostic.
- All functional requirements must be mapped to clear acceptance criteria.

1.5 Critical Dependencies

- Availability of the primary 'spec.md' source file containing the actual business goals and functional requirements.
- Reference to the original specification document for mapping of non-functional requirements and scope boundaries.

2. Architecture Workflows & Visual Diagrams

No architectural diagrams were provided in the source data.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Requirement / Criterion Description	Source Section
------------	-------------------------------------	----------------

QUAL-CONT-01	Absence de détails d'implémentation (langages, frameworks) dans la définition des fonctionnalités.	Content Quality
QUAL-REQ-01	Les exigences doivent être testables et non ambiguës.	Requirement Completeness
QUAL-REQ-02	Les critères de succès doivent être mesurables et agnostiques techniquement.	Requirement Completeness
QUAL-READ-01	Toutes les exigences fonctionnelles doivent posséder des critères d'acceptation clairs.	Feature Readiness

3.2 Security Rules

No specific security rules identified in the provided quality checklist.

3.3 Data Models

No data models identified in the provided quality checklist.

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Goals & Objectives	HIGH	Le document est une checklist; les objectifs métier se trouvent dans le fichier spec.md référencé.
Functional Requirements	HIGH	Le document valide la présence des exigences mais ne les liste pas. Se référer à la spécification source.
Non-Functional Requirements	HIGH	Absentes. Se référer à la spécification source.
Scope & Out-of-Scope	HIGH	Absentes. Se référer à la spécification source.
Open Questions & Uncertainties	MEDIUM	Le document confirme qu'il n'y a plus de marqueurs [NEEDS CLARIFICATION].

4.2 Remediation & Workflow

The current documentation serves as a quality gate. To move from a "Blocked" state to "Ready for Development," the team must integrate the content of the referenced `spec.md` into this technical specification to populate the missing functional and non-functional requirements.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
API	TECHNICAL_STACK	QUAL-REQ-01	The primary interface for programmatic communication between the backend service and external consumers.
Acceptance Criteria	BUSINESS_DOMAIN	QUAL-READ-01	Measurable conditions that must be satisfied to mark a functional requirement as complete.
