

CourseHub API - Technical Specification & Architecture Document

Table des Matières

1. Executive Summary & Architecture Overview

- 1.1 Executive Brief
- 1.2 Maturity Assessment
- 1.3 Technical Stack
- 1.4 Architectural Constraints
- 1.5 Critical Dependencies

2. Architecture Workflows & Visual Diagrams

- 2.1 CourseHub API Specification Quality Traceability
- 2.2 Specification Validation Workflow

3. Detailed Technical Specifications & Business Rules

- 3.1 Requirements Traceability
- 3.2 Security Rules
- 3.3 Data Models

4. Project Governance & Structural Gaps

- 4.1 Structural Gaps
- 4.2 Remediation & Workflow

5. Technical & Domain Glossary (Terminology Reference)

1. Executive Summary & Architecture Overview

1.1 Executive Brief

The CourseHub API project is currently represented by a quality validation framework designed to ensure specification completeness and readiness. The system focuses on decoupling business value from implementation details, ensuring that all functional requirements are testable, measurable, and bounded by clear acceptance criteria before proceeding to the planning phase.

1.2 Maturity Assessment

The project is currently in a state of REFINEMENT. While the quality checklist indicates a high level of internal validation, the actual architectural substance—including scope definitions and technical specifications—is absent from the current graph, residing instead in external references. The presence of high-severity structural gaps regarding scope and out-of-scope boundaries prevents a READY status.

1.3 Technical Stack

- No specific languages, frameworks, or databases defined in the current validation scope.

1.4 Architectural Constraints

- Strict prohibition of implementation leakage (languages, frameworks, APIs) within feature definitions.
- Requirement for technology-agnostic success criteria.
- Mandatory alignment between functional requirements and measurable outcomes.
- Requirement for unambiguous and testable acceptance scenarios for all primary user flows.

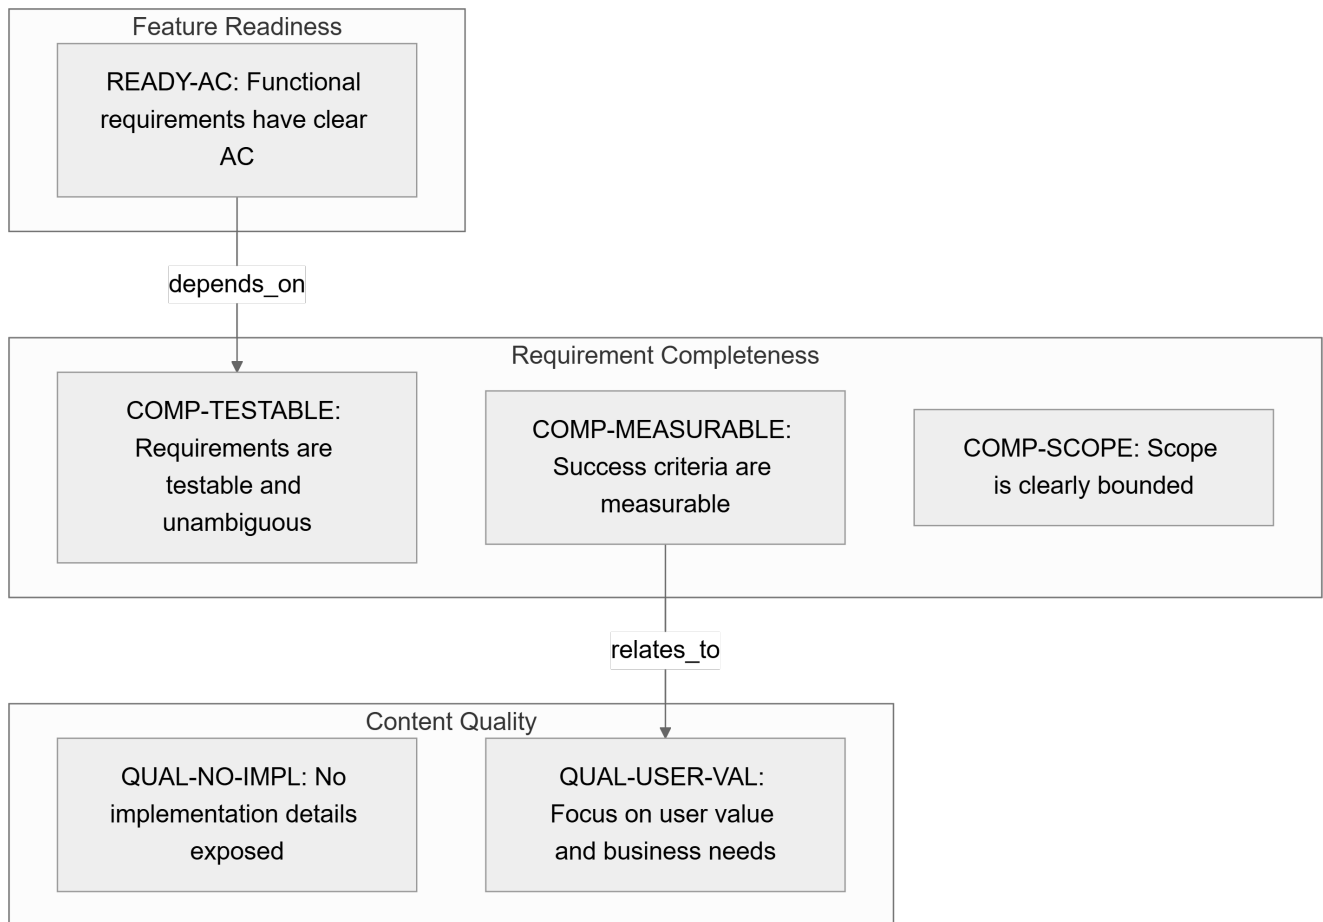

1.5 Critical Dependencies

- External reference to `spec.md` for core functional definitions.
- Logical dependency between Acceptance Criteria (`READY-AC`) and Requirement Testability (`COMP-TESTABLE`).
- Relational link between Measurable Success Criteria (`COMP-MEASURABLE`) and User Value focus (`QUAL-USER-VAL`).

2. Architecture Workflows & Visual Diagrams

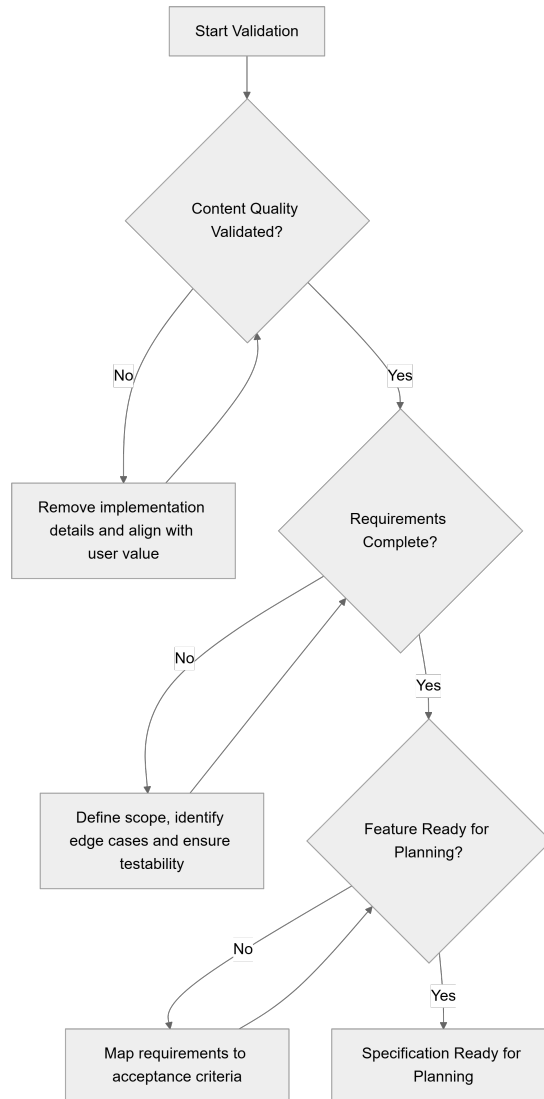

2.1 CourseHub API Specification Quality Traceability

Maps the relationship between quality constraints, completeness requirements, and feature readiness for the CourseHub API specification.

2.2 Specification Validation Workflow

The operational process for validating the CourseHub API specification based on the provided checklist criteria.

3. Detailed Technical Specifications & Business Rules

3.1 Requirements Traceability

Identifier	Type	Description	Source Section	Status
QUAL-NO-IMPL	Constraint	No implementation details (languages, frameworks, APIs) are exposed in the feature definition.	Content Quality	validated
QUAL-USER-VAL	Constraint	The specification focuses on user value and business needs.	Content Quality	validated
COMP-TESTABLE	Requirement	Requirements are testable and unambiguous.	Requirement Completeness	validated
COMP-MEASURABLE	Success Criterion	Success criteria are measurable and technology-agnostic.	Requirement Completeness	validated

COMP-SCOPE	Requirement	Scope is clearly bounded.	Requirement Completeness	validated
READY-AC	Requirement	All functional requirements have clear acceptance criteria.	Feature Readiness	validated

3.2 Security Rules

- No specific security rules defined in the current validation scope.

3.3 Data Models

- No specific data models defined in the current validation scope.

4. Project Governance & Structural Gaps

4.1 Structural Gaps

Missing Section	Priority	Remediation Advice
Scope & Out-of-Scope	HIGH	The document is a checklist; the actual scope definition is likely in the referenced 'spec.md' file.
Open Questions & Uncertainties	MEDIUM	No open questions were listed as the checklist indicates all items are complete.

4.2 Remediation & Workflow

The project must integrate the content of the external `spec.md` into the central technical specification to resolve high-priority gaps and move from the REFINEMENT phase to a READY status.

5. Technical & Domain Glossary (Terminology Reference)

Term	Category	Context Anchor	Project Definition
API	TECHNICAL_STACK	QUAL-NO-IMPL	The programmatic interface whose implementation details must remain hidden from the high-level functional definitions to prevent leakage.
Feature	BUSINESS_DOMAIN	READY-AC	A distinct unit of functionality that must align with measurable outcomes and possess clear acceptance criteria.
