

1. Expense Tracker Implementation Roadmap

A high-level traceability and execution flow showing the dependencies between project phases and key tasks.

2. Expense Addition Sequence

Interaction flow for adding a new expense involving the UI, validator, and storage adapter.

❑ Could not render diagram — invalid Mermaid syntax

Raw Mermaid code:

```
sequenceDiagram
    actor User
    participant UI as "ExpenseForm (T010)"
    participant VAL as "validators.ts (T002/T011)"
    participant STORE as "storage.ts (T004/T012)"
    participant LS as "LocalStorage"

    User->>UI: Enter expense details
    UI->>VAL: validateExpense(data)
    VAL-->>UI: Validation Result (Success/Fail)

    alt is valid
        UI->>STORE: addExpense(expense)
        STORE->>LS: Save to LocalStorage
        LS-->>STORE: Confirm Save
        STORE-->>UI: Success Response
        UI->>User: Show success & update list
    else is invalid
        UI->>User: Display validation errors
```

3. Expense Tracker Data Model

Conceptual data model for the expense tracking system based on the identified types and storage requirements.
