

1. CLI To-Do Manager Technical Traceability

Maps the relationship between implementation tasks, constraints, and the core storage requirement using exact identifiers.

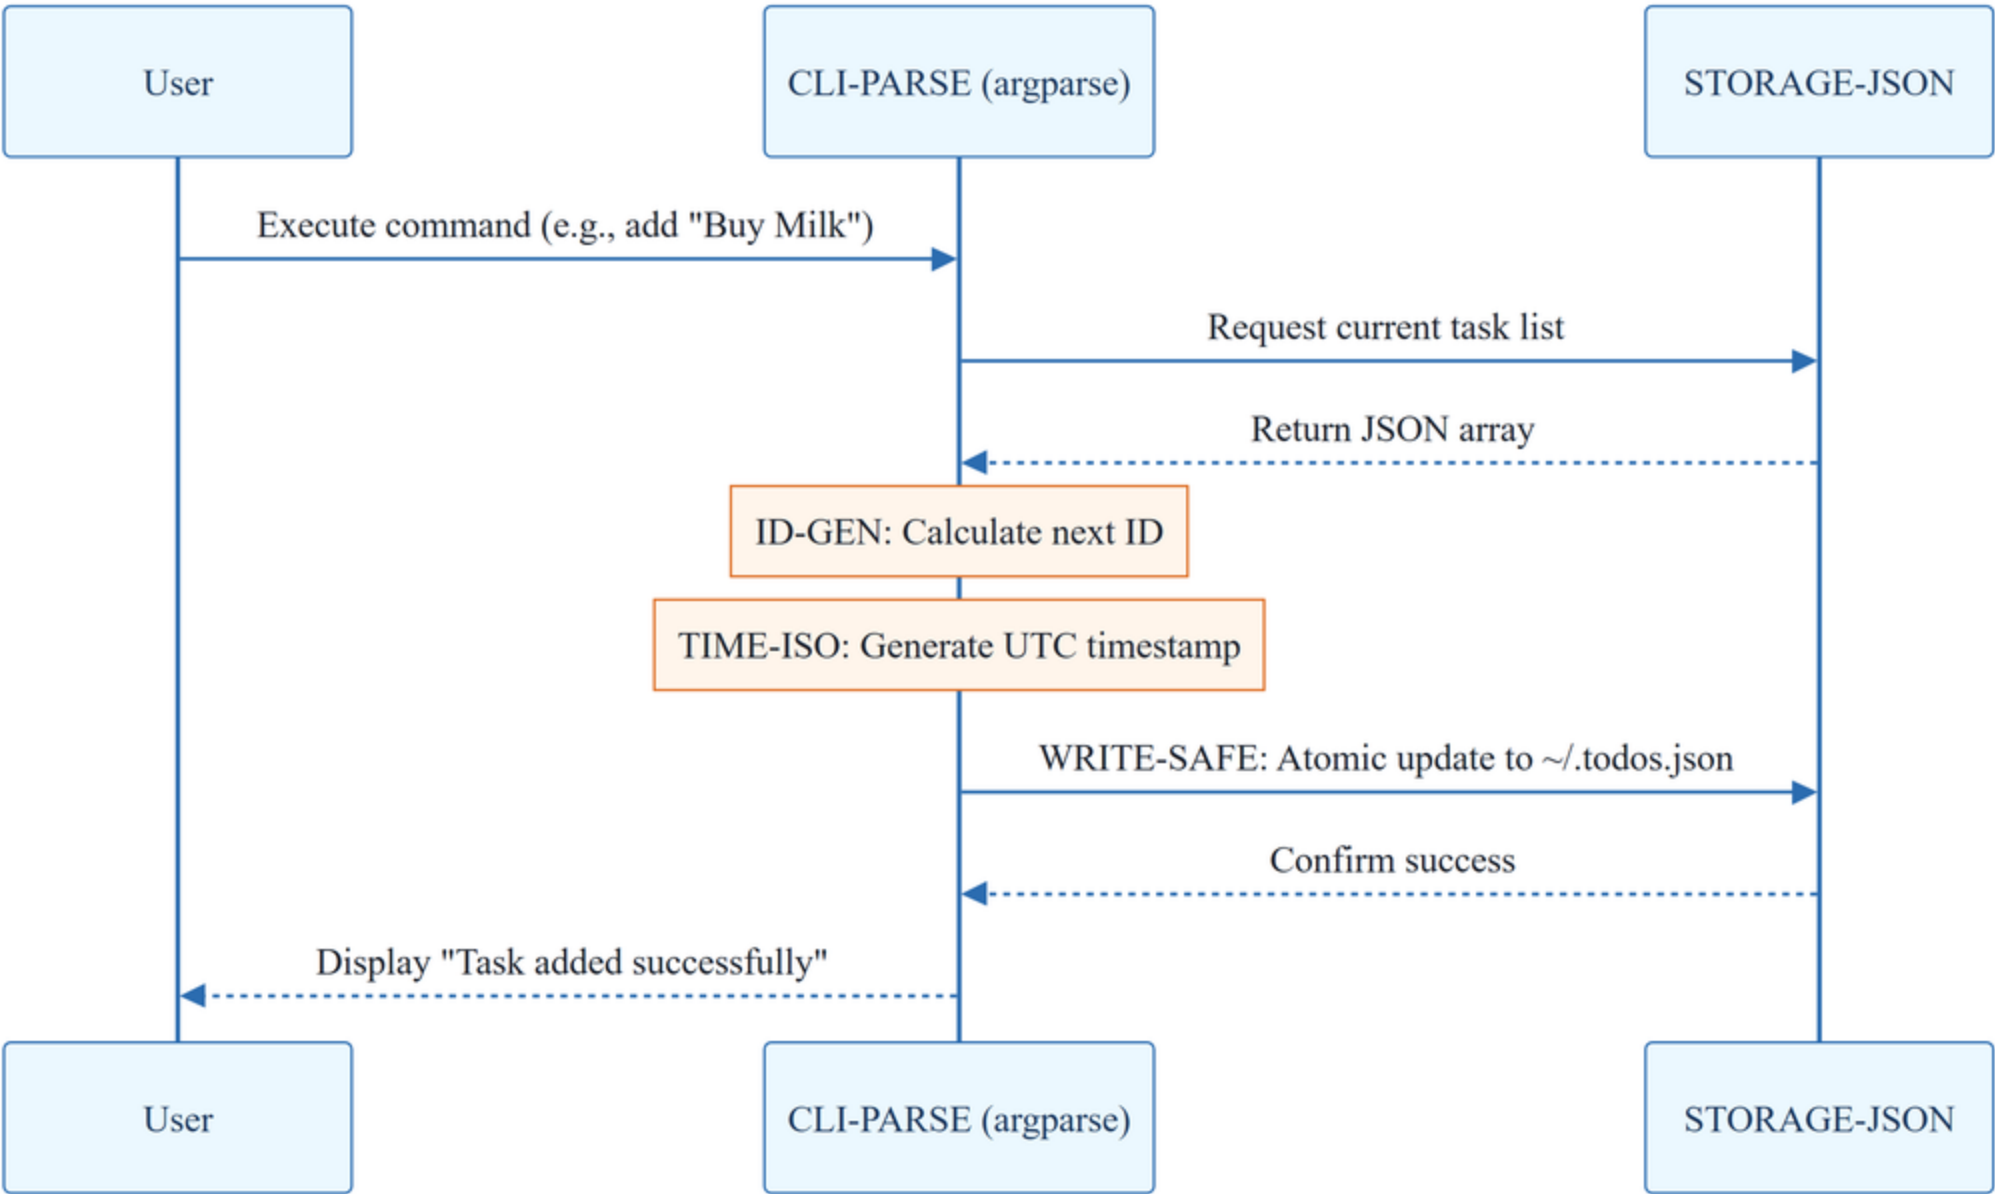

2. Task Persistence Workflow

Models the business logic for adding a task, including the safe-write pattern and ID generation.

3. CLI Interaction Sequence

Sequence of interactions between the User, the CLI Parser, and the JSON Storage system.

4. Data Model Specification

Defines the structure of the task objects stored within the JSON array.
