

1. Project Implementation Traceability Map

Maps the dependency flow from project setup through foundational work to specific user story implementation and final polis

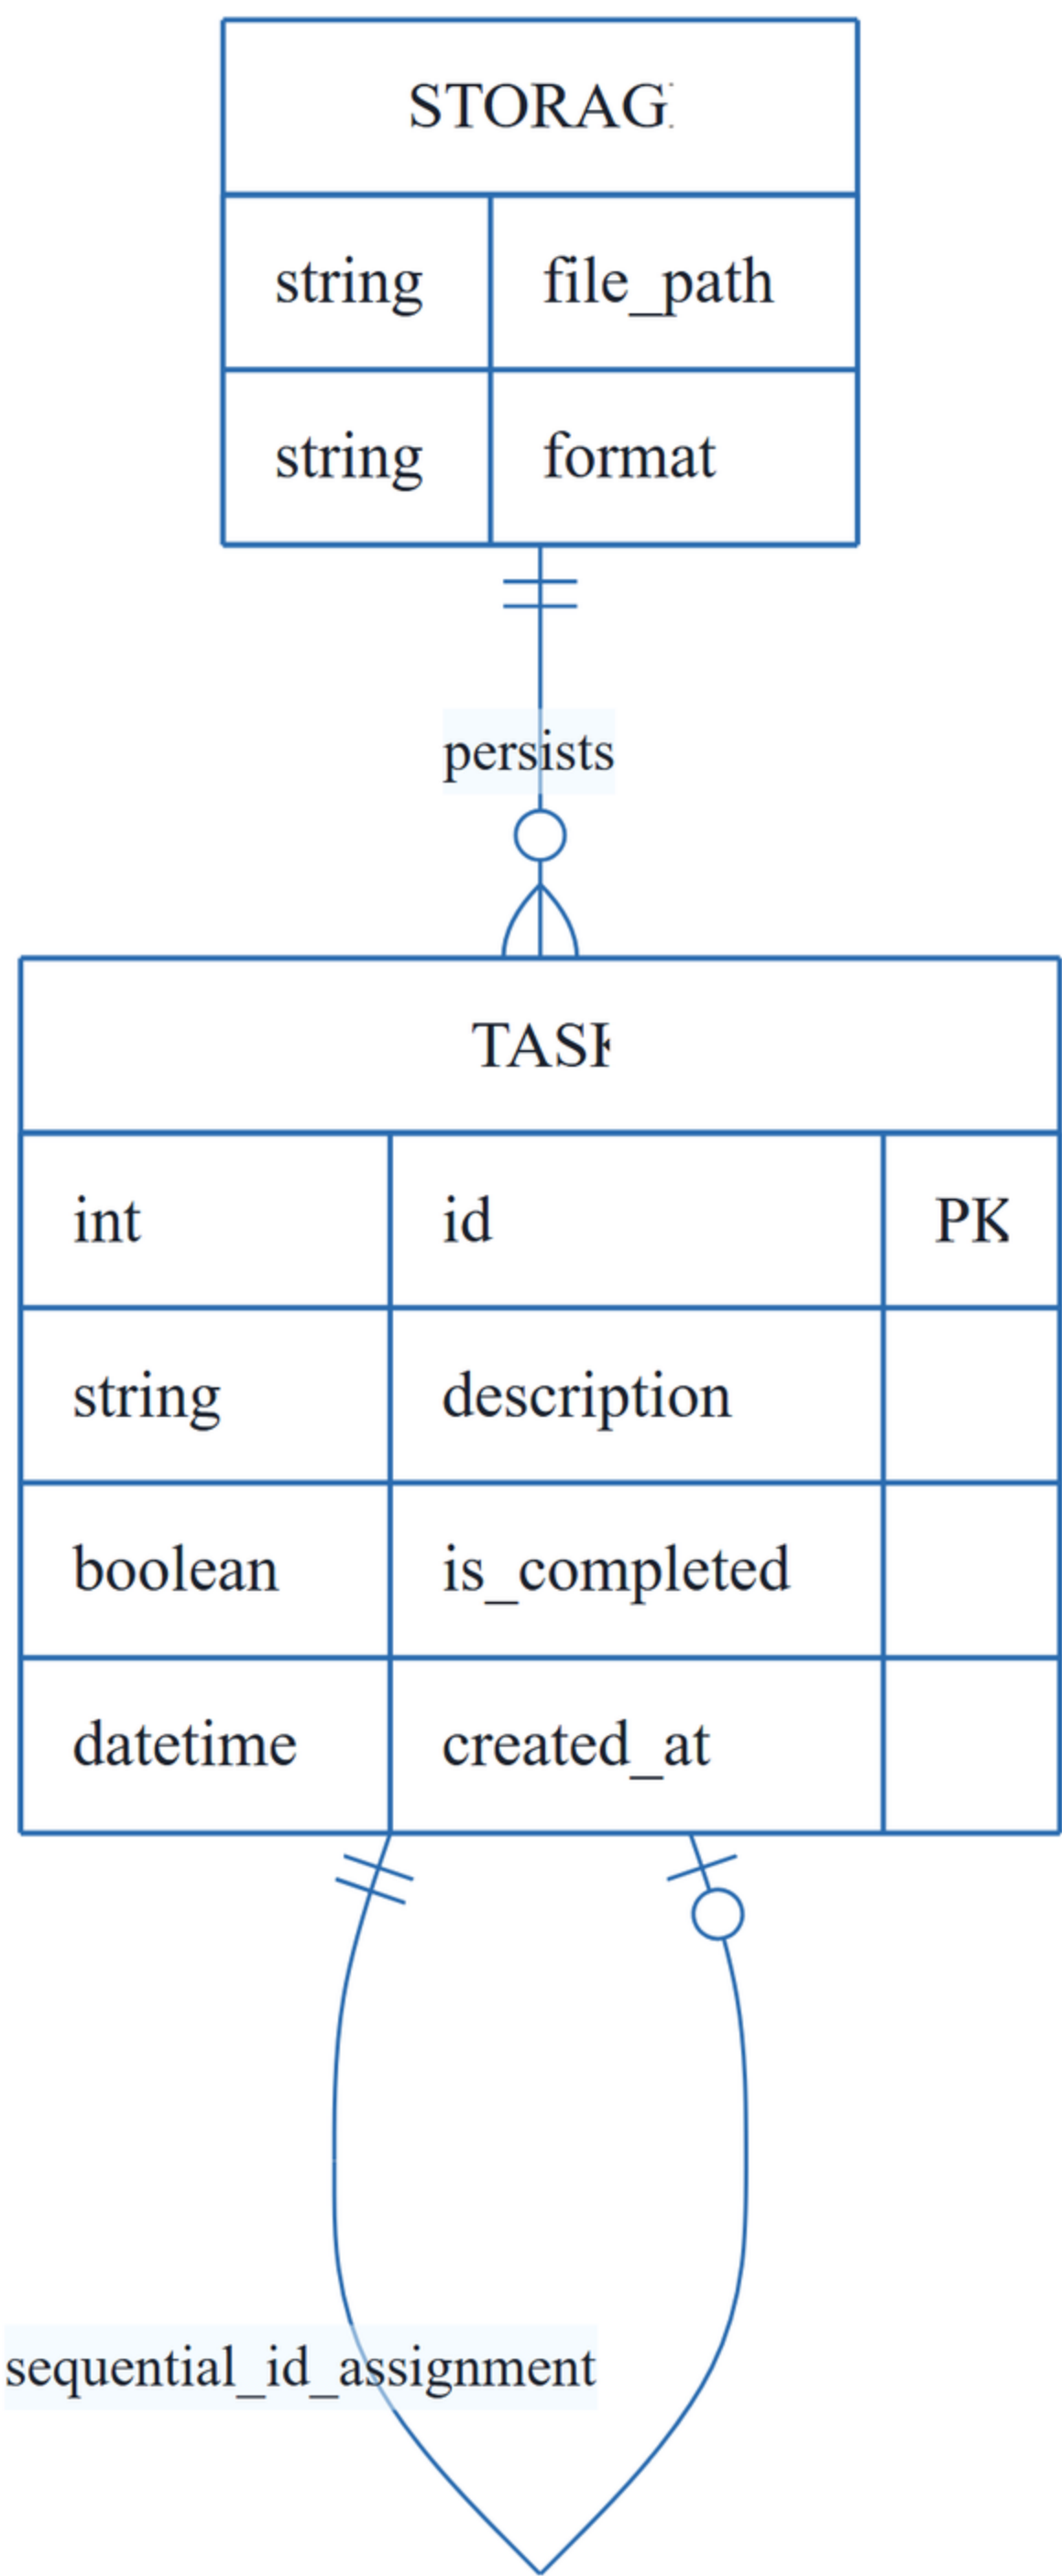

2. CLI Command Execution Workflow

Models the business logic flow for a typical CLI command interaction, including decision points for input validation and output

3. CLI To-Do Manager Data Model

Represents the task entity and its persistence in the JSON storage system.

4. User Story Interaction Sequence

Illustrates the interaction between the User, CLI, Service, and Storage layers for adding a task.
