# CLI To-Do List Manager - Technical Specification & Architecture Document

## 1. Executive Summary & Architecture Overview

### 1.1 Executive Brief

The project is a CLI To-Do List Manager currently in a pre-planning validation phase. The provided documentation is a quality checklist designed to ensure that business requirements are testable, technology-agnostic, and free of ambiguity before technical implementation begins. It serves as a governance gate rather than a technical specification.

### 1.2 Maturity Assessment

The project is currently in a state of REFINEMENT. While the quality checklist indicates that business-level requirements are complete, the technical architecture is entirely absent. The presence of high-severity structural gaps regarding security, performance constraints, and concrete testing plans indicates that while the 'what' is defined, the 'how' is not yet specified, preventing immediate execution.

### 1.3 Technical Stack

- *No technical stack defined (Project is currently technology-agnostic).*

### 1.4 Architectural Constraints

- Strict separation of business requirements from implementation details.
- Mandatory removal of all [NEEDS CLARIFICATION] markers prior to planning.
- All success criteria must be measurable and technology-agnostic.
- Requirement for 100% coverage of functional requirements by clear acceptance criteria.

### 1.5 Critical Dependencies

- Reference to the external specification file [spec.md] for detailed functional requirements.
- Logical dependency of the Planning Phase on the successful completion of the Validation Phase.

## 2. Architecture Workflows

& Visual Diagrams

## 2.1 Specification Validation Traceability

Maps the relationship between the validation phase, its specific quality criteria, and the final readiness state using exact identifiers.

## 2.2 Specification Readiness Workflow

Operational workflow for validating a specification, including decision gates for quality and completeness.

### 3. Detailed Technical Specifications & Business Rules

### 3.1 Requirements Traceability

| Identifiant      | Type                 | Description                                                                         | Source Section                  |
|------------------|----------------------|-------------------------------------------------------------------------------------|---------------------------------|
| VALIDATION-PHASE | phase                | Validation de la complétude et de la qualité des spécifications avant planification | Specification Quality Checklist |
| QUAL-CONT        | acceptance_criterion | Absence de détails d'implémentation (langages, frameworks, APIs)                    | Content Quality                 |
| QUAL-USER        | acceptance_criterion | Focus sur la valeur utilisateur et les besoins business                             | Content Quality                 |
| COMPL-CLARITY    | acceptance_criterion | Absence de marqueurs [NEEDS CLARIFICATION]                                          | Requirement Completeness        |
| COMPL-TESTABLE   | acceptance_criterion | Exigences testables et non ambiguës                                                 | Requirement Completeness        |
| READY-FUNC       | acceptance_criterion | Tous les besoins fonctionnels ont des critères d'acceptation clairs                 | Feature Readiness               |
| PLANNING-READY   | task                 | Prêt pour la phase de planification                                                 | Notes                           |

### 3.2 Security Rules

- *No security rules defined in the current validation phase.*

### 3.3 Data Models

- *No data models defined in the current validation phase.*

## 4. Project Governance & Structural Gaps

### 4.1 Structural Gaps

| Missing Section                   | Priority | Remediation Advice                                                                                           |
|-----------------------------------|----------|--------------------------------------------------------------------------------------------------------------|
| Dependencies & Integration Points | MEDIUM   | Le document mentionne que les dépendances sont identifiées dans la spec, mais elles ne sont pas listées ici. |
| Checkboxes Checklist              | LOW      | Le contenu actuel est une checklist, mais pas une checklist d'exécution technique (implémentation).          |

| Missing Section                    | Priority | Remediation Advice                                                                      |
|------------------------------------|----------|-----------------------------------------------------------------------------------------|
| Testing & Validation               | HIGH     | Aucun cas de test technique ou plan de validation n'est défini pour la tâche elle-même. |
| Security & Performance Constraints | HIGH     | Absence totale de contraintes techniques de sécurité ou de performance.                 |
| Open Questions & Uncertainties     | LOW      | Le document affirme qu'il n'y a plus de zones d'ombre.                                  |

#### 4.2 Remediation & Workflow

The project must transition from a "Quality Validation" state to a "Technical Design" state. This requires the creation of a full technical specification including the missing sections identified in 4.1, specifically focusing on the technical architecture, security protocols, and a concrete test plan before the PLANNING-READY state can be fully operationalized for development.

### 5. Technical & Domain Glossary (Terminology Reference)

| Term    | Category        | Context Anchor | Project Definition                                                                                                                                          |
|---------|-----------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Feature | BUSINESS_DOMAIN | READY-FUNC     | A functional unit of delivery that must satisfy specific measurable outcomes and associated validation criteria before transitioning to the planning stage. |
