

# 1. Task Data Model ER Diagram

Represents the persistent data structure for the CLI To-Do List Manager stored in ~/.todos.json

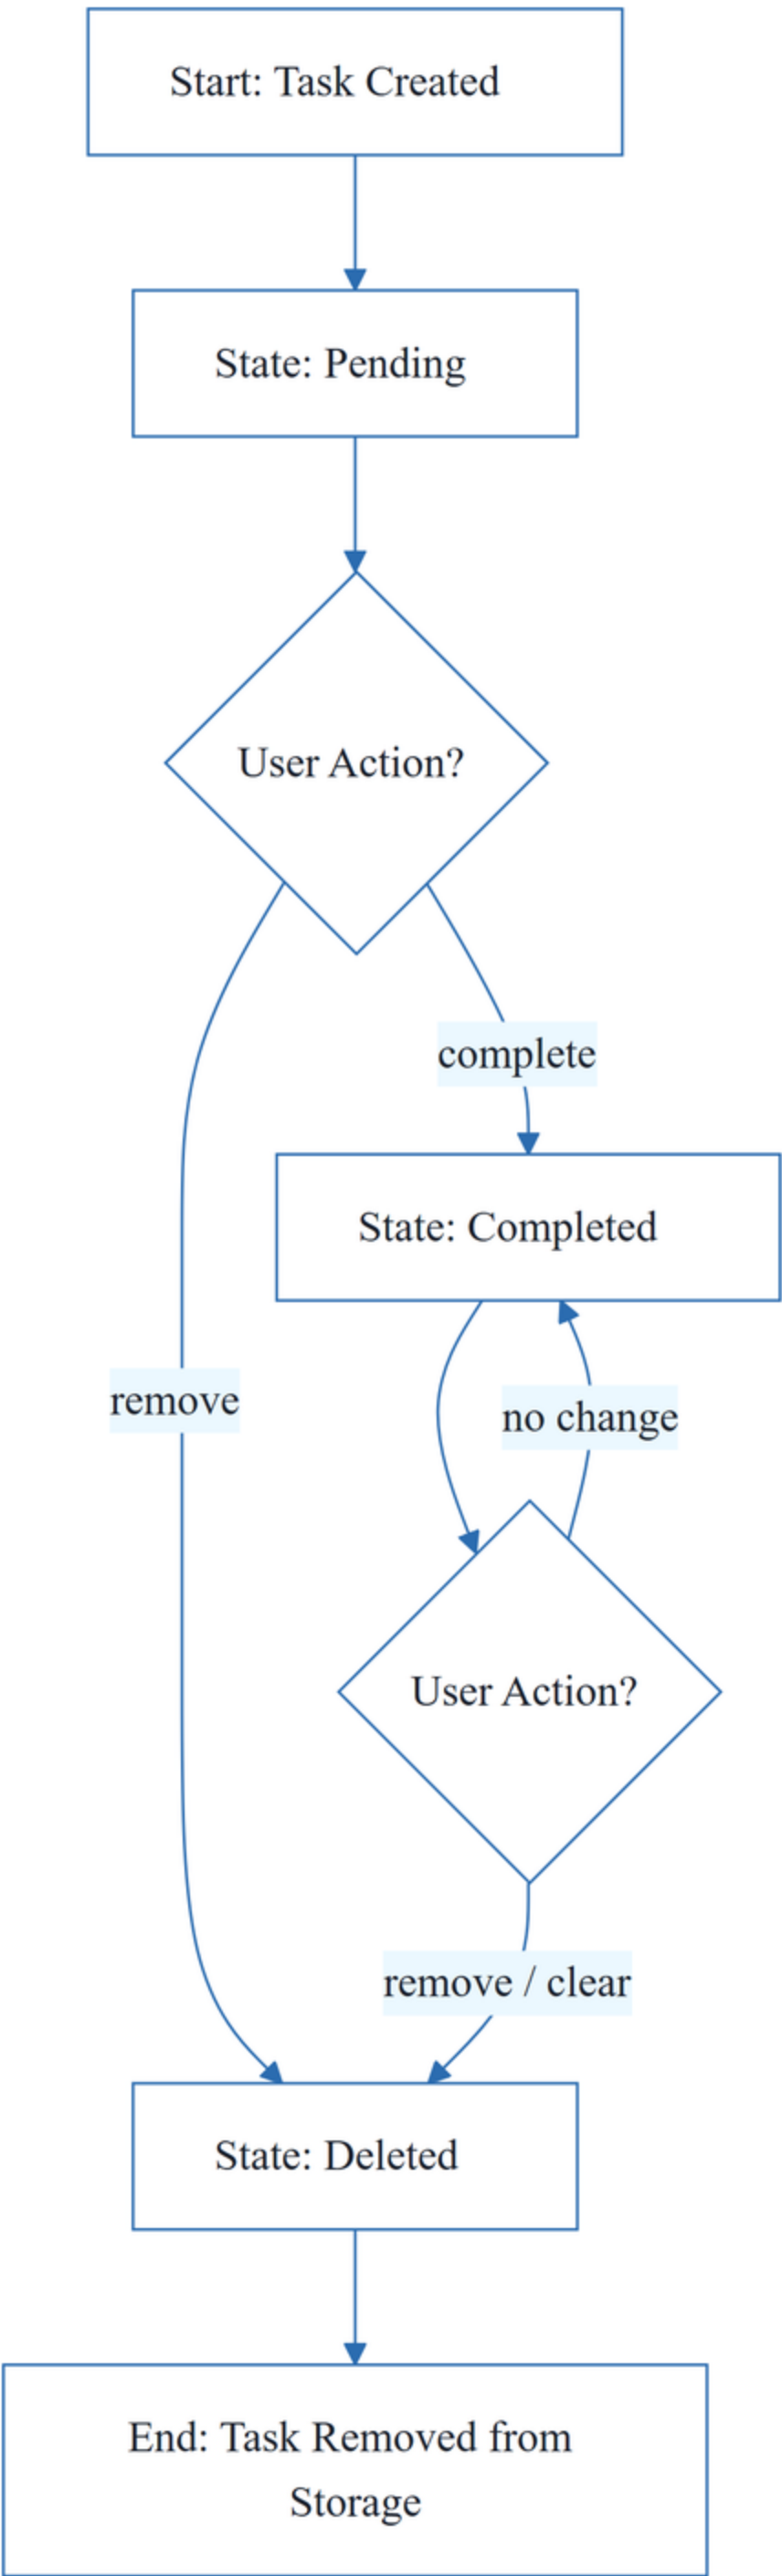

## 2. Data Model Implementation Traceability

Maps the high-level data model task to specific field implementations and their associated validation/operational constraints

# 3. Task State Transition Workflow

Models the business logic for task state changes including decision points for deletion and completion

# 4. Storage Access Sequence

Interaction flow between the CLI User, the Application Logic, and the JSON Storage file
